Hawaii completed	9	15

AFMIS

AHC KOREAN SITES

Installation Fld Date	DFAC's	POS Devices
Camp Casey completed	1	2
Camp Castle completed	1	2

AFMIS

- **Transition to Web Environment**
- General System Enhancements
  - There is no longer an End of Day Cycle or End of Month Cycle
  - The system will support a high degree of server consolidation. It is flexible enough so that in theory a single server could support all sites, multiple servers could be used at a central location or servers could be placed at the region or installation levels
  - A more complete audit trail will be available for transactions.
  - Remote access of data will now be available

AFMIS

- General System Enhancements Cont.
  - The system is being designed to require less administrative support at the installation level.
  - Dining Facilities will now have direct access to data in DSS.
  - The system will be easier to maintain and enhance.
  - AFMIS DFO functions and POS functions will now be more tightly integrated.
  - System provides a much friendlier user interface making use of drop down lists, item searches, check boxes and other web controls.

AFMIS

- General System Enhancements Cont.
  - System has a variety of data lookup /search capabilities for data such as items and recipes so that the user no longer has to remember the identification codes (e.g. NSNs and Recipe Numbers in this case).
  - System supports tactical operations as well as garrison.
  - Overall improvement in ability to maintain and enhance the system including consolidation of the TISA/IFA and DFO databases into a single AFMIS database.

AFMIS

- General System Enhancements Cont.
  - Operational ration reporting improved.
  - Improved representation of customer and account information that allows sites to capture the information they need without resorting to bogus customers/accounts to track special transactions.

AFMIS

- SCP 14-00 Milestones
  - Lead Site Test (Fort Lee) August 2005
  - Deployment schedule will be developed after Lead Site Test
